

- HIGH DENSITY OF OXYGEN MOLECULES
- OXYGEN ABSORPTION ALONG WITH ACTIVE SUBSTANCES
- OXYGEN MASK
- OXYGEN PEELING

Code: 9825

FACE TREATMENT

DERMO OXY

OXYGEN TREATMENT

Oxygen treatment is a procedure that tightens and refreshes, stimulates cellular respiration, increases firmness and elasticity of the skin and provides the appearance of greater density and vitality. It reduces irritation, acts on stretch marks and scars, improves skin balance and hydration, opens pores and fights inflammation and bacteria successfully. The treatment is non-invasive and has no side effects. Special VECOM technology ensures the performance of this treatment by isolating oxygen from other gases and the atmosphere in order to improve this effect.

OXYGEN BATH

By converting oxygen from the air into sterile oxygen, intensive oxygenation and detoxification of skin cells is achieved. It gradually stimulates cell metabolism and strengthens all physiological functions of the skin, which results in an improvement in the general functioning, structure and appearance of the skin.

LIQUID OXYGEN

Stimulation of cellular metabolism through the previous binding, transfer and release of atmospheric oxygen creates oxygenation, improves microcirculation and as a result, ensues in detoxification of the organism (binding and removal of carbon dioxide).

OXYGEN PEELING

The system that performs this peeling uses physiological solution and medical oxygen under high pressure, whereby water drops of 5 to 100 microns are formed in which one hundred percent medical oxygen is stored. These drops are directed on the surface of the skin, opening the pores and performing gentle microdermabrasion. There is slight exfoliation on the skin (peeling of the skin), followed by circulation and lymphatic drainage stimulation.

TREATMENT PROCEDURE

- > In the treatment procedure, a dry bath with sterile oxygen is used first, which deeply disinfects the skin
- > Then the serum is ingested with the help of an oxygen spray gun in order to administer all the necessary active substances (serums, peptides, natural bleaches).
- > At the end of the treatment, a mask can be used, which additionally brings pure oxygen into the skin and therefore accelerates the formation of new cells, detoxification and improves collagen production.

ADVANTAGES OF DERMO OXY DEVICE:

- > The conversion of oxygen from the air into sterile oxygen encourages intense oxygenation of the skin
- > Oxygen is paired with active substances to treat the skin (hyaluronic acid, vitamins, serums) and applied into the deepest layers, which greatly accelerates collagen synthesis
- > This is the healthiest and most natural facial treatment
- > Oxygen technology increases the amount of atmospheric oxygen in the skin immediately after application
- > Oxygen increases the microcirculation of the skin
- > The effect of 'brand new skin' is achieved - after the procedure, the skin appears renewed (pink, fresh looking and visibly rejuvenated)

OXYGEN APPLICATOR

Code: 0548

Code: 3560

OXYGEN MASK

Plastic transparent mask for oxygen treatment that covers the entire face.

Code: 3400

TREATMENT EFFECTS

- > RADIANT AND HYDRATED SKIN
- > FEELING OF FRESHNESS AND IMPROVED BLOOD CIRCULATION
- > ACNE-FREE FACE
- > ELIMINATED SKIN REDNESS
- > INSTANT SKIN GLOW
- > WELL-TONED SKIN

Technical characteristics

Product name: DERMO OXY
 Code: 9825
 Voltage: 220-240 V AC; 50/60 Hz.
 Power: 350 W
 Main fuse: T-6,3 A
 IC Classification IEC60601/1: Class I, Type BF
 Screen dimensions: 61x16 mm
 Number of handles: 3
 Number of programs: 3
 Flow and density of oxygen: when flow 5L/min, density is $\geq 90\%$
 Output pressure: 30KPa ~70KPa
 Noise: ≤ 55 dB
 Normal insulation resistance: ≥ 100 M Ω
 Normal electrical resistance capacity: 3000 V/0.5 mA/Min 10
 Level meter: on oxygen concentrator
 Working method: continual working method
 Set contains: Air brush gun with spray x 2 pcs, oxygen applicator x 1 pc, plastic oxygen mask x 1 pc
 Dimensions (LxWxH) 370x480x910 mm
 Weight: 25 kg
